All multiples of 4 are even numbers.

There is a repeating pattern in the ones column: 0, 4, 8, 2, 6

Year 3 Term 2

230 - 80
Bridging boundaries by counting back in efficient steps

230 - 30 - 50 = 150

304 - 297
Find the difference between two numbers

304 is 7 more than 297
297 is 7 less than 304
so the difference between them is 7

435 - 199
Round then adjust

Take away 200 then add 1

All multiples of 8 are even numbers.

All multiples of 8 are also multiples of 2 and 4

Unit fractions have a numerator of 1

If the denominator is 5 there are 5 equal parts.

If the denominator is 8 there are 8 equal parts.

Non-unit fractions have a numerator greater than 1

The numerator is 2 so two out of 3 equal parts are shaded.

When the denominators are the same, the larger the numerator, the larger the fraction.

When numerators are the same, the larger the denominator the smaller the fraction.

$$\frac{2}{3} = \frac{4}{6} = \frac{6}{9}$$

If there are 2 times as many equal parts, then there are 2 times as many shaded parts

If there are 3 times as many equal parts, then there are 3 times as many shaded parts

$\frac{1}{3}$ of 12 = 4
 $12 \div 3 = 4$

$\frac{1}{5}$ of 15 = 3
 $15 \div 5 = 3$

$\frac{1}{3}$ of 12 = 4
 $\frac{2}{3}$ of 12 = $2 \times 4 = 8$

$\frac{1}{5}$ of 15 = 3
 $\frac{4}{5}$ of 15 = $4 \times 3 = 12$

$\frac{1}{5} + \frac{2}{5} = \frac{3}{5}$

When adding fractions with the same denominators the denominator stays the same, just add the numerators.

$\frac{5}{8} - \frac{2}{8} = \frac{3}{8}$

When subtracting fractions with the same denominators the denominator stays the same, just subtract the numerators.
